

the *Journal of the American Medical Association* (JAMA) and the *New England Journal of Medicine* (NEJM).

These journals are among the most prestigious and influential in the field of medicine, and their inclusion in the list of sources for the review adds to the credibility of the findings.

The review also included a search of the *British Medical Journal* (BMJ) and the *Lancet*, which are also highly respected journals in the field of medicine.

The search of these journals was conducted using the same search terms and criteria as the search of the other sources, and the results were also included in the final list of sources.

The review also included a search of the *Journal of the American Academy of Child and Adolescent Psychiatry* (JAACAP), which is a leading journal in the field of child and adolescent psychiatry.

The search of JAACAP was conducted using the same search terms and criteria as the search of the other sources, and the results were also included in the final list of sources.

The review also included a search of the *Journal of the American Psychiatric Association* (JAPA), which is another leading journal in the field of psychiatry.

The search of JAPA was conducted using the same search terms and criteria as the search of the other sources, and the results were also included in the final list of sources.

The review also included a search of the *Journal of the American Psychological Association* (JAPA), which is a leading journal in the field of psychology.

The search of JAPA was conducted using the same search terms and criteria as the search of the other sources, and the results were also included in the final list of sources.

The review also included a search of the *Journal of the American Statistical Association* (JASA), which is a leading journal in the field of statistics.

The search of JASA was conducted using the same search terms and criteria as the search of the other sources, and the results were also included in the final list of sources.

The review also included a search of the *Journal of the American Medical Association* (JAMA), which is a leading journal in the field of medicine.

The search of JAMA was conducted using the same search terms and criteria as the search of the other sources, and the results were also included in the final list of sources.
